CmpE 567 –Broadband Wireless Networks

Objectives & Description: This course aims to introduce concepts and research topics in emerging wireless broadband networks. In the first part of the course, the wireless medium and its features will be explained in detail. Next, we will cover wireless networks ranging from WLANs to WiMAX, Cognitive Radio with the emphasis on mobility, Quality of Service (QoS), and seamless operation. Most of the course will focus on Cognitive Radio Networks. We will also learn how such networks can be analytically modeled.

Instructor: Assist. Prof. H. Birkan YILMAZ (Room: 38, birkan.yilmaz@boun.edu.tr)

Reference books:
“Wireless Communications and Networks,” Stallings, Prentice Hall.

Tentative Outline:

Week 1: Wireless Technologies & Wireless Medium
Week 2: Modulation and Interference
Week 3: Wireless LANs, Part 1
Week 4: Wireless LANs, Part 2
Week 5: Wireless LANs, Part 3 & Wireless PAN
Week 6: Wireless MANs, Part 1
Week 7: Wireless MANs, Part 2
Week 8: Cognitive Radio, Part 1
Week 9: Midterm Exam
Week 10: Cognitive Radio, Part 2
Week 11: Cognitive Radio, Part 3
Week 12: Cognitive Radio, Part 4
Week 13: Wireless WANs (This semester will take 12 weeks; we may omit this)

Grading: (A change of +- 5% may occur in the basis of evaluation!)
15% Quizzes (Quizzes will take place on the 3rd and 6th weeks)
35% Projects (2 or 3) & Reports & Paper Presentation
20% Midterm Exam
30% Final Exam
